Letter

Sir:

Pursuant to a phone call with the Examiner, enclosed herewith is a copy of the Information Disclosure Statement and PTO-1449 which were filed with the original application on March 21, 2001. The Examiner indicated that there was not a copy in the USPTO file. Also enclosed is a copy of the non-patent reference for the Examiner to consider.

Respectfully submitted,

By

Grant A. Johnson

INFORMATION DISCLOSURE STATEMENT UNDER 37 C.F.R. §1.97

Assistant Commissioner for Patents
Washington, D.C. 20231
Sir:

Applicants request that the information listed on the attached Form PTO-1449 be considered by the Office during the pendency of the above entitled application, pursuant to 37 C.F.R. §1.97. In accordance with 37 C.F.R. §1.97(h), the filing of this Information Disclosure Statement shall not constitute an admission that any information cited therein is, or is considered to be, material to patentability as defined in 37 C.F.R. §1.56(b). In the interest of full and complete disclosure to the Office, some or all of the art cited herein may not be considered by Applicant(s) or the Undersigned to be material under the new standard of materiality defined in 37 C.F.R. §1.56(b), enacted March 16, 1992, but may be material under the old standard of materiality defined in 37 C.F.R. §1.56(a), last amended on November 28, 1988, or may merely be technical background which may be of interest to the Examiner. In accordance with 37 C.F.R. §1.97(g), the filing of this Information Disclosure Statement shall not be construed to mean that a search has been made.

Docket No. ROC 9 2000 0250

Automatic laptop reconfiguration based on location

Problem Solved By This Invention:

Laptops are an enormous benefit to users who find themselves traveling often. One of the problems in traveling is staying in touch with the home office. Trying to get email from a new location requires either changing the dialup configuration to match the local city information or to dial a nationwide number, which gets quite expensive. Once new email and the laptop's scheduler/calendar program (such as Lotus Notes) have been updated, the traveler must take into account the new time zone. The 4 PM conference call that the secretary scheduled may not be at 4 PM for the traveler. What is needed is an automated way for the laptop to automatically configure itself for the location of the traveler.

Description of Invention:

This new invention integrates a global positioning satellite (GPS) tracking chip into a mobile system and uses the location information it receives from the chip to automatically reconfigure the laptop computer when it enters a new geographic area. The key components to this design are the GPS tracking chips and the GPS software that updates the system configuration when the machine enters a new area.

The GPS software would have a database of cities, boundaries, and information about the bounded geographical area. The software would be configured to poll the GPS chip at an adjustable time interval, at power up from a powered-off state or wake-up from a sleep or low power state in order to take advantage of this invention. The software after receiving the new location information, would compare it to its current configuration settings and determine if the laptop had entered a new area. If a new area had been entered, the software would then update the settings of the programs that needed this information. Software such as Lotus Notes, Internet Dialers, Outlook schedulers, and others would be updated to dial to the appropriate local phone number. Other things such as the system clock and current time zone would also be updated and the changes would be effective immediately.

The advantages to using this solution is that it takes the burden off of the traveler to have to know which phone numbers to dial and which time zones are applicable to the current location and events. All of this would become automated and less prone to errors. Applications such as calendars could be extended to track events based on time zones, allowing automatic updates & scheduling of calendars.

Unique Benefits:

Current implementation is to have the traveler update the laptop manually.
